SUMMARY

CS graduate with hands-on experience building full-stack web applications, cloud infrastructure on AWS, and reliable AI-backed systems. Comfortable working across design, product, and engineering teams in fast-moving startup environments. Strong foundation in algorithms, data structures, and modern JavaScript frameworks.

EDUCATION

New York University **August, 2025**

Bachelor of Arts, Computer Science *New York, NY*

- **Relevant Coursework:** Basic Algorithms, Agile Software Development, Operating Systems, Software Engineering, Data Structures, Computer Systems Organization, Data Management & Analysis, Applied Internet Technology

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, SQL, HTML/CSS
Frameworks: React, Node.js, Express, Next.js, Flask, Three.js
Tools/API: AWS (S3, EB, RDS, Route 53), GitHub, OMP, MPI, Logisim, Capacitor, Terraform, Postgres, Docker
Concepts: Agile, Data Structures, Neural Networks, NLP, Artificial Intelligence, Database Design, Network Programming

EXPERIENCE

End Of An Era **January 2026 - August 2026**

Software Engineer Intern *Remote*

- Built the role-based access system for the estate planning app, with separate planner, executor, and beneficiary roles that control which pages and data each user can reach
- Built the invite flow (send, validate, accept, resend, revoke) with random tokens and personalized messaging, so access comes from accepted invites in the database and revoking removes the role
- Handled the Capacitor integration for the mobile version of the app
- Developed automated release validation and production health check scripts, reducing manual verification effort during deployments
- Standardized 30+ reusable page components across the codebase, improving UI consistency and accelerating future development

The Coder School **2019 - 2026**

Code Coach | Camp Coordinator *Berkeley, CA | New York, NY*

- Led summer camp operations for 100–200 students per season, mentoring new coaches and coordinating curriculum delivery, scheduling, and parent communication
- Taught JavaScript, Python, and Java to 100+ students, improving coding proficiency and problem-solving skills through personalized instruction
- Designed personalized lesson plans for diverse learning needs, including ASD

PERSONAL PROJECTS

Home Valuation Analysis Tool **2026 - Present**

- Built a full-stack home valuation tool in React, TypeScript, and Node that sends RentCast's AVM and comparable-sales data, plus the agent's notes, to Claude through the Anthropic Messages API
- Ranked comps by correlation and computed price per square foot and implied value in code, passing verified numbers into the prompt
- Forced structured output with tool use and a strict JSON schema, with enums for assessment, relevance, and confidence, required fields at every level, and no extra properties allowed
- Diagnosed corrupted output where comp rankings leaked into the reasoning string despite strict mode, then moved the free-text field to the end of the schema and added output validation
- Containerizing the app with Docker for deployment to AWS
